

APPLICA

MULTIMEDIA

What is Applica Multimedia?

Applica is a hardware/software product that enables TWO people to surf, work, learn and play, in full multimedia, using a single PC. Simply connect a monitor, mouse, keyboard and speakers, and Applica Multimedia creates a second PC.

Applica's unmatched speed - 132 Mbs and display rates of up to 60 frames a second - provides faster performance and more bandwidth than any home connectivity solution on the market - so much that even CDs, DVDs, and multimedia from the Web can be shared and enjoyed!

2nd PC & Network in a Box

There are many good reasons to buy a second PC: e-mail, learning, surfing, gaming, working. But once you've invested the money for a second PC, you still have to spend more time and money to share printers, modems and your Internet connection - or buy two of everything.

Applica provides you with that second PC AND the equivalent of a network in a single box, so that both users can share printers, files, CDs and DVDs, and even a single Internet connection and ISP account.

With Applica Multimedia, both users can surf the Internet at the same time with just a single modem connection - dialup, cable, xDSL, or satellite - and one ISP provider. You've doubled the time to surf, while still saving on monthly service charges. And the next time you have to upgrade your PC, with a larger hard disk, faster modem or more memory, your second PC is automatically upgraded, too!

Sharing the Unused Power

How can two people share a single PC? Today's Pentium-class processors are so fast, that they spend most of their time waiting for something to do. Applica Multimedia takes advantage of this by distributing that excess computing power to a second user.

Applica Multimedia includes a card that you place inside a PCI slot in your computer. That card has connections for the monitor, keyboard, mouse and speakers that will make up your second PC. Or use your big screen television as your display, to play games or watch DVD movies from your PC.

Easy Installation

The Applica Multimedia System is so easy to install that even a computer novice can be finished in less than 15 minutes. During installation, your Internet connection and peripherals are automatically configured as shared, so that your second PC is ready for immediate use.

Connecting

If you already have a home network, Applica Multimedia fits in perfectly, interfacing transparently with Home Free, Symphony, Tut and others.

Best Value

Applica Multimedia is the only home networking product that lets two or more people share an Internet connection, printers and files by harnessing the unused power of their Pentium class PC.

You'll save every month on service charges for surfing the Web, and whenever you upgrade your PC, your Applica Multimedia 2nd PC will be automatically upgraded too!

For
Windows
95/98

With Applica
Multimedia
two users can...

Surf the
World Wide
Web at the
same time

Send and
receive
e-mails and
files

Run
financial and
accounting
software

Create word
processing
documents

Chart &
graph with
spreadsheets

And much,
much more...
