OFFICE & PERSONAL SOLUTIONS

Straight from the Importer!

Introducing Applica Multimedia Stations

- **For the cost of a Applica Multimedia Station, SVGA screen, monitor, keyboard and mouse you can hook up another user to a PC in the office! (if you have an old 486 monito you will save hundreds more!)**

- **Save space - no Main unit or CPU to find a place for**

- **Save time -15 min typical installation (less installing of programs and fewer computers to maintain)**

- **Connects to Networks or is a simple network in itself—use the same printer**

With Applica Multimedia, **users are able to run their favourite applications simultaneously and independently**. For the purpose of an illustration, while one user is preparing his presentation in Microsoft PowerPoint, the second user can surf the World Wide Web. Both users are able to share the same resources - the printer, modem and CD-ROM drive and have access to the same modem, telephone line and Internet Service Provider (ISP) account to surf the Internet. In addition, each user is able to customise their Windows 95/98/2000 screen to their own taste and preferences. Everyone gets to choose their own favourite screen colours, wallpaper and icons. This is especially crucial if you want to prevent access to certain applications or present a simple interface tailored to each user's needs and requirements.

Applica Multimedia is **fully equipped PCI card** with onboard sound/ video (additionally, the Applica Multimedia card has a built-in MPEG decoder, allowing playback of DVD and MPEG video titles) and is ready to connect to the second monitor, keyboard and mouse, and the software that takes advantage of the built-in multi-tasking feature of Windows. It is the most **cost-effective solution** for users who do not want to invest heavily in another PC and yet enjoy the full benefits and functionality of a second PC.

Expanding Internet Access, Audio and Appliances
